

Today's educational facilities face unique security challenges: high levels of foot traffic and valuable equipment, often coupled with an open door policy where anyone can enter or leave the facility at any moment. Maintaining a safe, high-quality learning environment means maximizing the use of the full video surveillance infrastructure

## 3 Benefits of Omnipresence 3D for Education

### Monitor the Entire Facility Through One Common Interface

Using a visual 3D representation of the entire facility, Omnipresence unifies all video surveillance feeds into a common, intuitive interface. Security guards, managers, and control room operators can quickly accomplish surveillance-related tasks with minimal system training.

### Follow Suspects From Camera to Camera Throughout the Facility

In case of an emergency, it is imperative that the video surveillance system can be used to follow a suspect from camera to camera across a facility, so that police can be dispatched to the proper location. Omnipresence makes this intuitive, so that in a high-pressure situation, the security personnel is not left trying to remember the locations and names of individual cameras.

### Rapid Emergency Response

When seconds count, Omnipresence automatically provides security operators with the most relevant video feeds to accomplish the task at hand.

The Omnipresence 3D Surveillance System is designed to protect facilities where security is a critical concern. To learn more about how Omnipresence can be integrated with your security system, contact a Feeling Software representative.
