

Omnipresence 3D for Military

Video is an invaluable tool for the modern military, used for security, strategic operations, and training. In each of these instances, advanced context is required to process and understand the visual information.

3 Benefits of Omnipresence 3D for Military

Gain Unparalleled Situational Awareness from Your Video System

Omnipresence, with its built-in spatial understanding, automatically provides the control room operator with the most relevant videos to the task at hand. This provides personnel with an advanced situational awareness, with no need to memorize the positions of each camera in the system.

Combine Visual Information for Multiple Sources

Omnipresence synthesizes information from a multitude of sources into a unified visual environment. Sources of visual data may include: unmanned aerial vehicles (UAVs), remote monitoring stations and surveillance systems at military facilities.

Optimize Training and Review

Omnipresence provides an intuitive visual interface to comprehend events from multiple angles simultaneously. For post-training review, personnel gain a complete, global understanding of events.

* Support for U.S. DoD Instruction 8500.2 is currently underway.

The Omnipresence 3D Surveillance System is designed to protect facilities where security is a critical concern. To learn more about how Omnipresence can be integrated with your security system, contact a Feeling Software representative.
