

Omnipresence 3D for Correctional Facilities

In a prison, the security system is key to the safety of personnel and inmates.

Used for day-to-day activities and investigations, the security system must also be ready to respond to a multitude of security threats, and provide valuable intelligence in emergency situations.

3 Benefits of Omnipresence 3D for Correctional Facilities

Gain Situational Awareness from Alarms

Whether from a perimeter fence or a interior door, any alarm can be set to instantly provide a big picture understanding based on the alarm's physical location. Local PTZ cameras can be automatically targeted to view the source of the alarm. With Omnipresence, control room operators gain an unparalleled situational awareness, enabling smarter incident response.

Track Individuals across the Entire Facility

With an understanding of the coverage of every camera in the surveillance system, Omnipresence provides security operators the tools that they need to track an individual from camera to camera throughout an entire facility, with no need to memorize camera locations and call numbers. Operators are ready to respond to emergency incidents in real time, or rapidly complete investigations.

Optimize Training and Review

Omnipresence provides an intuitive visual interface to comprehend events from many angles simultaneously. For review of training activities, personnel gain a complete, global understanding of training objectives, seen from multiple perspectives.

The Omnipresence 3D Surveillance System is designed to protect facilities where security is a critical concern. To learn more about how Omnipresence can be integrated with your security system, contact a Feeling Software representative.
